Canadian Manuscript Report of Fisheries and Aquatic Sciences

Manuscript reports contain scientific and technical information that contributes to existing knowledge but which deals with national or regional problems. Distribution is restricted to institutions or individuals located in particular regions of Canada. However, no restriction is placed on subject matter, and the series reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries and aquatic sciences.

Manuscript reports may be cited as full publications. The correct citation appears above the abstract of each report. Each report is abstracted in *Aquatic Sciences and Fisheries Abstracts* and indexed in the Department's annual index to scientific and technical publications.

Numbers 1-900 in this series were issued as Manuscript Reports (Biological Series) of the Biological Board of Canada, and subsequent to 1937 when the name of the Board was changed by Act of Parliament, as Manuscript Reports (Biological Series) of the Fisheries Research Board of Canada. Numbers 1426 - 1550 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Manuscript Reports. The current series name was changed with report number 1551.

Manuscript reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page. Out-of-stock reports will be supplied for a fee by commercial agents.

Rapport manuscrit canadien des sciences halieutiques et aquatiques

Les rapports manuscrits contiennent des renseignements scientifiques et techniques qui constituent une contribution aux connaissances actuelles, mais qui traitent de problèmes nationaux ou régionaux. La distribution en est limitée aux organismes et aux personnes de régions particulières du Canada. Il n'y a aucune restriction quant au sujet; de fait, la série reflète la vaste gamme des intérêts et des politiques du ministère des Pêches et des Océans, c'est-à-dire les sciences halieutiques et aquatiques.

Les rapports manuscrits peuvent être cités comme des publications complètes. Le titre exact paraît au-dessus du résumé de chaque rapport. Les rapports manuscrits sont résumés dans la revue *Résumés des sciences aquatiques et halieutiques*, et ils sont classés dans l'index annuel des publications scientifiques et techniques du Ministère.

Les numéros 1 à 900 de cette série ont été publiés à titre de manuscrits (série biologique) de l'Office de biologie du Canada, et après le changement de la désignation de cet organisme par décret du Parlement, en 1937, ont été classés comme manuscrits (série biologique) de l'Office des recherches sur les pêcheries du Canada. Les numéros 901 à 1425 ont été publiés à titre de rapports manuscrits de l'Office des recherches sur les pêcheries du Canada. Les numéros 1426 à 1550 sont parus à titre de rapports manuscrits du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom actuel de la série a été établi lors de la parution du numéro 1551.

Les rapports manuscrits sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre. Les rapports épuisés seront fournis contre rétribution par des agents commerciaux.

ABSTRACT

Midgley, P. 2003. Definitions and codings of localities, herring sections, and stock assessment regions for British Columbia herring data. *Can. Manusc. Rep. Fish. Aquat. Sci.* 2634: 113 p.

Current listings of localities used for coding British Columbia herring data are presented. Herring sections and stock assessment regions, the geographic units used for data analysis and annual stock assessments, are defined.

RÉSUMÉ

Midgley, P. 2003. Definitions and codings of localities, herring sections, and stock assessment regions for British Columbia herring data. *Can. Manusc. Rep. Fish. Aquat. Sci.* 2634: 113 p.

Nous présentons la liste courant des localités utilisées pour le codage des données de la Colombie-Britannique sur le hareng. Les sections d'hareng et les région d'évaluation, les unités géographique utilisées pour l'analyse des données et les évaluations annuelles du stocks sont définies.

INTRODUCTION

British Columbia herring data (catch, spawn, and biological samples) have been coded geographically since 1950, using a location system unique to herring management (Houston and Hamer 1979; Isaacson and Hourston 1972). This system is based on geographically specific locality codes, which may be aggregated to form larger geographically associated groupings. Locality codes used prior to 1971 (Isaacson and Hourston 1972) differed from those used subsequently (Hourston and Hamer 1979), in that they were unique to a statistical area rather than being unique coastwide. The advent of the roe fishery in 1972 required a new approach to the coding of localities and to the subsequent aggregation of the data into increasingly larger geographic units during analysis of the status of stocks (Hourston and Hamer 1979). This occurred because individual stocks and roe fisheries overlapped statistical areas and sub areas, while herring staged in front of or on the spawning grounds. At the same time, pre-1970 codes were converted to the newer system to permit the generation of consistent catch, spawn, and biological sample databases for stock assessment analysis.

In 1988, the herring sections were redefined to represent the lowest level at which herring data could be grouped in an effort to better reflect their biology (Haist and Rosenfeld 1988). This was done primarily for three reasons: to be consistent with current DFO statistical areas, to reflect new herring spawning and fishing areas, and to be as consistent as possible with the existing management area boundaries.

This manuscript is an update of Haist and Rosenfeld (1988) and describes all current revisions to the system for aggregating localities, and updates the locality codes to January 2003.

METHODS

Each geographical locality identified as a herring spawning or fishing site within British Columbia has been given a unique four digit code. Since catch locations prior to 1970 were often reported only by statistical area, a new locality code became necessary to convert location codes from the original system. Locality codes greater than 2000 are reserved for unknown locations within a statistical area or section.

Locality codes and names are listed in alphabetical order (Table 2), and numerical order (Table 3). Additionally, "catch" location codes (sorted alphabetically by statistical area) are presented in Table 5. Catch location codes are similar to other location codes, except that they

are preceded by a "1", and have a hyphen after the second digit. New location codes are added to the database as new spawning or fishing sites are identified on an ongoing basis.

Herring sections are the lowest level of geographic aggregation used for analysing Pacific herring data. Section boundaries are defined to group adjacent herring spawning grounds into clusters. However, where these clusters cross statistical area boundaries, separate herring sections are defined within each statistical area to facilitate aggregation of data by area. Sections identified from clusters of spawnings were given three digit numbers, the first two digits being the number of the statistical area in which they occurred. Two exceptions are Statistical Areas 2E and 2W, wherein the first 2 digits of the section numbers are 02 and 00 respectively. The third digit was assigned sequentially to sections, with zero being reserved for a section with unknown locality data within the statistical area.

The herring sections described in this report (Table 4) are redefined from Houston and Hamer (1979). The revisions take into account recent changes in herring spawning distributions and changes to statistical area boundaries. In addition, herring sections were defined to encompass entire management subareas (Pacific Fishery Management Area Regulations, amended February, 1985), wherever reasonable. Section boundaries are shown in Figures 1-6. Table 1 shows the relationship between statistical areas, herring sections, and management subareas.

Assessment regions have been defined to group herring sections containing the spawning grounds of the major migratory herring stocks, which are also the major roe herring fishing grounds.

There are currently five assessment regions (Figs. 7-8):

Assessment Region	Herring Sections
Queen Charlotte Islands	06, 20, 21, 23, 24, 25
Prince Rupert District	31 - 59
Central Coast	67, 70-79, 85, 86
Strait of Georgia	132, 135, 141 - 193, 292
West Coast Vancouver Island	230 - 259

Stock assessment analysis and forecasts are prepared annually for these five assessment regions.

COMPUTER DATA ACCESS

The location coding system is maintained as a dedicated backend MS Access database with links, where required, to user front end MS Access databases. An on-line backup of the coding system is maintained on the VAX785 in a direct access file, LOC1.DAT. Both of these systems are housed at the Pacific Biological Station.

ACKNOWLEDGMENTS

Lorena Hamer for historically maintaining the VAX785 direct access file and editorial comments. Charles Fort for his work in maintaining and updating the current locations MS Access database. Jake Schweigert for editorial comments.
